Figure 1. The effect of the number of trials on the number of correct responses.

[illegible]

Figure 1: Schematic representation of the experimental design. The diagram shows a sequence of events: 'Stimulus presentation' (a box with a question mark), 'Response' (a box with a question mark), 'Feedback' (a box with a question mark), and 'Inter-trial interval' (a box with a question mark). The 'Stimulus presentation' box is connected to the 'Response' box, which is connected to the 'Feedback' box, which is connected to the 'Inter-trial interval' box. The 'Inter-trial interval' box is connected back to the 'Stimulus presentation' box, forming a loop.

Figure 1. The effect of the number of trials on the number of correct responses. The number of correct responses was significantly higher than the number of incorrect responses for all groups. The number of correct responses was significantly higher than the number of incorrect responses for all groups. The number of correct responses was significantly higher than the number of incorrect responses for all groups.
